

Bioconversion of heavy oil recovery

Technology related to the use of biotechnological processes for enhanced heavy-oil recovery by introducing heavy oil-degrading microorganisms through an injection well into the formation above or adjacent a separate production well or into the formation at a production well. The processes is preferably used in conjunction with other oil recovery enhancement techniques such as steam injection, hot solvent extraction, CHOPS, fracking or CSS

Current areas of use:

Enhanced heavy-oil recovery

Equinor offer:

Standard non-exclusive license agreement

If this technology is of interest to your business please contact Equinor Technology Transfer, ETT@Equinor.com
Please be advised that a license is subject to compliance with Equinor's general conditions, policies and strategy.
