

Equinor joins Letter of Intent on offshore wind cooperation in Poland

1 July, 2020

Equinor today joined a Letter of Intent regarding cooperation to develop offshore wind energy in Poland. The letter was signed by high-level representatives of the Polish government, leading business associations and industrial partners. The declaration, inspired by the United Kingdom's Sector Deal for offshore wind, will provide strategic guidance for the development of the offshore wind sector in Poland. It will set the framework for close cooperation between the Polish government and the offshore wind sector.

Ingunn Svegården, Vice President Emerging Regions in New Energy Solutions at Equinor, says:

"Equinor welcomes the initiative for a Polish offshore wind Sector Deal and is proud to co-sign the Letter of Intent. This is an important moment in the development of offshore wind in Poland. We have positive experiences from the Sector Deal process in the United Kingdom, which has been instrumental for the successful development of the British offshore wind industry. Building on this experience, we want to contribute to making offshore wind a success story in Poland."

Michał Jerzy Kołodziejczyk, President of the Management Board of Equinor Polska, says:

"Equinor is currently maturing three large-scale offshore wind projects in Poland, together with our partner Polenergia. These projects are amongst the most mature offshore wind projects in the Polish part of the Baltic Sea. We have already started our engagement with potential Polish and international suppliers and are looking forward to deepening the cooperation. We appreciate the trustful dialogue we have with the Polish government on the framework for offshore wind. A timely adoption of the Offshore Wind Law will be a key element for the further maturation of our projects."
